

ValueForge

Turn trend signals into a decision-ready product strategy — in hours, not quarters.

A product-strategy copilot for CPG brand & innovation managers, built on Ai Palette's trend-intelligence and generative-concepting engine.

DELIVERABLE A · PRODUCT STRATEGY DECK

Problem · target user · the logic for differentiation & consumer-resonance mapping

The problem ValueForge solves

Brand managers are **data-rich but decision-poor**. Trends are everywhere; turning them into a defensible, launch-ready strategy is slow, manual, and risky.

- **Signal overload:** dashboards show a thousand trends; none say *which concept to build, for whom, why now*.
- **Slow NPD cycles:** synthesizing insight → concept → validation takes weeks of analyst + agency time.
- **High launch risk:** ~70–80% of CPG launches underperform; gut-feel concepting is expensive to get wrong.
- **Not decision-ready:** insight tools stop at charts; leadership needs a *recommendation* they can sign off.

The gap, in one line

Existing tools answer “**what’s trending?**”

Brand managers need “**what should we launch, and why will it resonate?**”

ValueForge closes it by

compressing **signal** → **concept** → **screened, ranked recommendation** into one guided flow that ends in a decision-ready strategy brief.

Who it's for

Primary user: the **CPG Brand / Innovation Manager** who owns the launch decision but not the data pipeline.

PRIMARY — Brand / Innovation Manager

- Owns NPD pipeline & launch P&L;
- Needs a defensible concept fast
- Pain: synthesis time + launch risk
- Win: decision-ready brief on demand

SECONDARY — Insights / Strategy Lead

- Validates rigor & data provenance
- Wants explainable scoring
- Pain: ad-hoc analyst requests
- Win: self-serve, governed insight

BUYER — Head of Innovation / CMO

- Signs the budget & the launch
- Cares about hit-rate & speed-to-market
- Pain: expensive misses
- Win: portfolio of higher-odds bets

Maturity-aware: the same product serves an exploratory team (self-serve) and an industrialized global CPG (governed, integrated) — see the tiering in the MarketPulse strategy.

The job to be done

“When a new trend emerges, help me decide **what to launch, for whom, and why it will resonate** — with evidence I can defend to leadership.”

A decision-ready output =

- **A ranked shortlist of concepts** tied to specific consumer needs and white-space, not a trend list.
- **A resonance score per concept** with the *drivers* shown (why it scores high/low) — explainable, not a black box.
- **The target segment & positioning** the concept wins with.
- **A one-click brief** leadership can approve — assumptions, evidence, and risks attached.

The logic — how ValueForge finds differentiation

A four-stage funnel turns raw signals into a **differentiated, defensible** recommendation. Each stage narrows with evidence.

Differentiation lens: a concept only advances if it sits in **white-space** — a strong consumer need that competitors aren't credibly serving in that market. (Intel/Tastewise stop at stage 2; ValueForge runs 1→4.)

Mapping consumer resonance

Every concept gets an explainable resonance score.

- **Resonance score** blends need intensity, momentum, fit-to-brand, and white-space.
- **Explainable by design (SHAP-style):** each concept's score is decomposed into its drivers — the manager sees *why*, not just a number.
- **Segment view:** resonance is mapped per consumer segment, so positioning is built in.
- **Output:** concepts in the green LAUNCH ZONE become the decision-ready shortlist.

Why ValueForge wins

Incumbents stop at insight; point tools cover one vertical. ValueForge owns the **end-to-end, multi-market, explainable** path to a decision.

Capability	Mintel / research	Tastewise / point tools	ValueForge
Signal → ranked concept (end-to-end)	Partial	Partial	Full 1→4
Multi-market / APAC depth	Broad but slow	US/vertical	18 langs / 24 ctry
Generative concepting	No	Limited	Concept Genie
Explainable resonance scoring	No	Limited	SHAP-style drivers
Output = decision-ready brief	Report	Dashboard	One-click brief

What the brand manager walks away with

One artifact: a **decision-ready product-strategy brief** — generated, evidenced, and exportable.

THE RECOMMENDATION

- Top 3 concepts, ranked
- Target segment + positioning
- Resonance score + drivers

THE EVIDENCE

- Signals & sources behind each
- White-space rationale
- Assumptions + confidence

THE NEXT STEP

- One-click export to brief/deck
- Share for sign-off
- Feed into NPD stage-gate

Speed: weeks of analyst + agency synthesis → a defensible recommendation in hours.

The thesis

- **Problem:** brand managers are data-rich but decision-poor; NPD is slow and risky.
- **User:** the CPG brand/innovation manager who owns the launch but not the pipeline.
- **Logic:** Sense → Synthesize → Create → Screen, advancing only white-space concepts.
- **Differentiation:** end-to-end, multi-market, and *explainable* resonance — the post-consolidation white space.
- **Outcome:** a decision-ready strategy brief, on demand.

ValueForge turns “what’s trending?” into “here’s what to launch, for whom, and why it will resonate” — the decision, not just the data.
